Juan Esteban González

I am a senior student of Applied Mathematics and Computer Science at El Rosario University, with a minor in pedagogy. My academic journey has fueled my passion for artificial intelligence, mathematical modeling, and numerical analysis. Beyond the classroom, I am dedicated to making a positive impact through my work with nonprofits focused on STEAM education for marginalized groups. This commitment to education aligns with my broader interests, which include diving, film photography, and an insatiable curiosity for learning new things. These diverse pursuits have not only enriched my personal growth but also enhanced my ability to approach problems from multiple perspectives.
