

CV of Eng. Giuliana Daniela Foti

I am a recent graduate in Construction Engineering, at the University of Bergamo, with specialization in the energy sector applied to construction. My study and research activities have focused on energy efficiency and sustainability in the building sector. In particular, the study of the efficiency of both thermal and electrical systems, to achieve almost zero energy in buildings (Nearly Zero-Energy Buildings or NZEB).

Finally, some research topics concern the use of home automation and smart home systems to improve sustainability and increase the consumption awareness of users or prosumers.
