

Paper ID: 5

Paper title: Optimal sizing of a hydrogen backup grid to support renewable generation in microgrids.

**David Toquica, PhD.**, received the B.S. degrees in electronic and electrical engineering from the Escuela Colombiana de Ingeniería Julio Garavito, Bogota, Colombia, in 2014 and 2015, and the master's degree in electrical engineering from the Universidad de Los Andes, Bogota, Colombia, in 2018. He received the Ph.D. degree in electrical engineering in 2023 from Université du Québec à Trois-Rivières, QC, Canada, while working with the Smart Energy Research and Innovation Laboratory. His research interests include energy markets, artificial intelligence applications for smart grids, micro-grids integration, renewable energies, and energy utility theory.
